

docker system service stale

observed behaviour: every website is weirdly cached but not functional? observe (TBD add date when agatha messaged me)

```
sudo systemctl stop docker
// you will probably get the warning: Warning: Stopping docker.service, but it can
still be activated by: docker.socket
sudo systemctl stop docker.socket
sudo systemctl start docker
```

see [Taiga](#) for reference on this issue

weird edge case

if docker ps returns nothing like this:

```
$ docker ps
CONTAINER ID   IMAGE      COMMAND                  CREATED   STATUS    PORTS   NAMES
```

restart the server on <https://kis.hosteurope.de/administration> → go to server overview → login → restart server

this cant be the solution so please investigate
