

Taiga

Taiga is an project management tool. [Website Documentation](#)

Relevant Information

Taiga Location

You can find the Taiga relevant files in:

```
/var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker/
```

Accessing the API

<https://taiga.ct-lab.info/api/v1/> API documentation

Backups

Taiga is getting backedup every Monday at 04:00 AM via cron jobs. It will execute the script in:

```
/var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker/taiga-backup.sh
```

The backup files are located under the following folder:

```
/var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker/taiga-backup/
```

[Documentation for backing up / restoring](#)

Troubleshooting

Taiga is unreachable

Start Taiga manually by entering the following in the SSH terminal:

```
cd ~/docker/taiga-docker/  
// taiga only  
./launch-taiga  
// taiga + penpot  
./launch-all.sh
```

Taiga only displays old stories

The server was probably restarted and docker.socket didn't restart correctly.

To fix this, enter the following in the SSH terminal:

```
cd ~/docker/taiga-docker/  
docker compose stop  
sudo systemctl stop docker  
// you will probably get the warning: Warning: Stopping docker.service, but  
it can still be activated by: docker.socket  
sudo systemctl stop docker.socket  
sudo systemctl start docker
```

If you get the following error:

```
[+] Running 8/9  
✔ Container taiga-docker-taiga-protected-1 Running 0.0s  
✔ Container taiga-docker-taiga-events-rabbitmq-1 Running 0.0s  
✔ Container taiga-docker-taiga-events-1 Running 0.0s  
✔ Container taiga-docker-taiga-front-1 Running 0.0s  
✔ Container taiga-docker-taiga-db-1 Healthy 0.5s  
✔ Container taiga-docker-taiga-async-rabbitmq-1 Running 0.0s  
✔ Container taiga-docker-taiga-async-1 Running 0.0s  
✔ Container taiga-docker-taiga-back-1 Running 0.0s  
✔ Container taiga-docker-taiga-gateway-1 Starting 0.8s  
Error response from daemon: failed to set up container networking: driver failed programming external connectivity on endpoint taiga-docker-taiga-gateway-1 (d623898db41274fd759b692f0714430a31e030edd6045d0cf73bdcba20386e): failed to bind host port for 0.0.0.0:9000:172.25.0.10:80/tcp: address already in use
```

```
cd ~/docker/taiga-docker/  
docker compose stop  
sudo systemctl stop docker  
// you will probably get the warning: Warning: Stopping docker.service, but  
it can still be activated by: docker.socket  
sudo systemctl stop docker.socket  
sudo lsof -i:9000  
// example output:  
// COMMAND      PID USER   FD    TYPE  DEVICE SIZE/OFF NODE NAME  
// docker-pr 2030447 root    4u    IPv4  9450363      0t0  TCP *:9000 (LISTEN)  
// docker-pr 2030464 root    4u    IPv6  9450370      0t0  TCP *:9000 (LISTEN)  
kill {pid}  
// in this case: kill 2030447  
// in this case: kill 2030464  
sudo systemctl start docker
```
