

# Taiga

Taiga is an project management tool. [Website Documentation](#)

## Relevant Information

### Taiga Location

You can find the Taiga relevant files in:

```
/var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker/
```

### Accessing the API

<https://taiga.ct-lab.info/api/v1/> [API documentation](#)

### Backups

Taiga is getting backedup every Monday at 04:00 AM via cron jobs. It will execute the script in:

```
/var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker/taiga-backup.sh
```

The backup files are located under the following folder:

```
/var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker/taiga-backup/
```

## Troubleshooting

### Taiga is unreachable

Start Taiga manually by entering the following in the SSH terminal:

```
cd /var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker
// taiga only
./launch-taiga
// taiga + penpot
./launch-all.sh
```

### Taiga only displays old stories

The server was probably restarted and docker.socket didn't restart correctly.

To fix this, enter the following in the SSH terminal:

```
sudo systemctl stop docker
// you will probably get the warning: Warning: Stopping docker.service, but it can
still be activated by: docker.socket
sudo systemctl stop docker.socket
sudo systemctl start docker
```
