

Taiga

Taiga is an project management tool. [Website Documentation](#)

Relevant Information

Taiga Location

You can find the Taiga relevant files in:

```
/var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker/
```

Accessing the API

<https://taiga.ct-lab.info/api/v1/> API documentation

Backups

Taiga is getting backcupped every Monday at 04:00 AM via cron jobs. It will execute the script in:

```
/var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker/taiga-backup.sh
```

The backup files are located under the following folder:

```
/var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker/taiga-backup/
```

Troubleshooting

Taiga is unreachable

Start Taiga manually by entering the following in the SSH terminal:

```
cd /var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker  
// taiga only  
. ./launch-taiga  
// taiga + penpot  
. ./launch-all.sh
```

Taiga only displays old stories

The server was probably restarted and docker.socket didn't restart correctly.

To fix this, enter the following in the SSH terminal:

```
sudo systemctl stop docker
// you will probably get the warning: Warning: Stopping docker.service, but
it can still be activated by: docker.socket
sudo systemctl stop docker.socket
sudo systemctl start docker
```
