Taiga

Taiga is an project management tool. Website Documentation

Relevant Information

Backups

Taiga is getting backupped every Monday at 04:00 AM via cron jobs. It will execute the script in

```
/var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker/taiga-backup.sh
```

The backup files are located under the following folder

```
/var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker/taiga-backup/
```

Documentation for Backing Up / Restoring

Troubleshooting

Taiga only displays old Stories

The server was probably restarted and

```
docker.socket
```

didn't restart correctly.

To fix this, enter the following in the SSH terminal

```
sudo systemctl stop docker
// you will probably get the warning: Warning: Stopping docker.service, but it can
still be activated by: docker.socket
sudo systemctl stop docker.service
```

Taiga is unreachable

Start Taiga manually by entering the following in the SSH terminal

```
cd /var/www/vhosts/ct-lab.info/taiga.ct-lab.info/taiga-docker
// taiga only
./launch-taiga
// taiga + penpot
./launch-all.sh
```
